                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             When it is the provided by the bound of the provided by the bound of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDCP is constructing a physical map of the prosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Manmoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPC1-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: n bw sp. the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://www.iffice.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCT-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.ouffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BQ948546 1502 950 bp mRNA linear EST 21-AUG-2002 AGENCOURT_8841400 Lupski_sciatic_nerve Homo sapiens cDNA clone IMAGE:6199251 5', mRNA sequence.

BACR14B09 of RPCI-98 library from Drosophila melanogaster (fruit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Web : www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - . This Drosophila melanogaster BAC ibrary (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Cenevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of a Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley brosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /tissue_type="epidermoid carcinoma, cell line"

Determination of this BAC-end sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a collaboration with the Berkeley prosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: on bw sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Drosophila melanogaster genome survey sequence T7 end of BAC # BACRIANO9 of RPCI-98 library from Drosophila melanogaster (fruit ALO, genomic survey sequence.

NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft" sequence. It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Direct Submission

4046 bp mRNA linear MAM 27-APR-1993

Canis familiaris adenylyl cyclase type VI mRNA sequence.

M94968.1

M94968.1

GI:163896

adenylyl cyclase type VI.

Canis familiaris cardiac muscle cDNA to mRNA.

SM Canis familiaris

Eukaryota: Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Mammalia; Eutheria; Carnivora; Fissipedia; Canidae; Canis.

                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylylcyclases (also referred as adenylcyclase, adenylate cyclase and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present cDNA sequence encodes human partial cardiac adenylcyclase VI (ACVI) isoform which is used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GluLeuGlyLeuArgAlaValAlaLeuGlyPheGluAspThrGluValThrThrPro 100

The present sequence encodes human adenylylcyclase isoform VI (AC-VI) from the present invention. The present invention describes a recombinant replication-defective viral particle (I) comprising a gene encoding a beta-adrenergic signalling particle (I) comprising a gene encoding a beta-ASP) operably linked to a promoter. Also described are: (1) a recombinant pro-viral plasmid (Ia) comprising a gene encoding a beta-ASP, as above, operably collinked to a promoter and further comprising a replication-defective viral genome; (2) a (mammalian) cell transfected with (I) or (Ia); (3) an isolated polynucleotide comprising a sequence encoding a human isolated polynucleotide comprising a sequence which hybridises at high stringency to (3); and (6) a vector comprising the polynucleotide of (3); and (6) a vector filtered adenovirus particle preparation. (I) is used to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; adenylylcyclase VI; AC-VI; beta-adrenergic signalling protein;

                                                                                                              enhancing
                                                                                                      The present invention relates to methods and compositions for enhancin cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylytcyclases (also referred as adenylcyclase, adenylate cyclase and CAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present DNA sequence encodes human cardiac adenylcyclase VI (ACVI) isoform which is used for generating a third beta-ASP transgene, used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signaling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylylcyclases (also referred as adenylcyclase, adenylate cyclase and cAMP synthetase) and G-protein receptor kinase adenylate cyclase and for treating heart disease, especially in mammalian hearts and for treating heart disease, especially congestive heart failure. The present DNA sequence encodes human cardiac adenylcyclase VI (ACVI) isoform which is used for generating a fourth beta-ASP transgene, used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GluLeuGlyLeuArgAlaValAlaLeuGlyPheGluAspThrGluValThrThrThrPro 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylylcyclases (also referred as adenylcyclase, adenylate cyclase and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present cDNA sequence encodes human modified cardiac adenylcyclase VI (ACVI) isoform which is used for generating a beta-ASP transgene, used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polynucleotide encoding a modified adenylylcyclase polypeptide useful for enhancing cardiac function in mammalian hearts, and for treating heart disease, especially congestive heart failure -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /*tag= a

N-terminus and a relatively shorter C-terminus as it lacks the C2b cepion. hAG6 cDNA was initially isolated from a human heart cDNA library using an adenylyl cyclase PCR fragment as probe. It was used to design primers that were used in a PCR-based RACE to obtain the full-length cDNA sequence. The invention relates to the hAC6 gene, methods for the recombinant production of purified hAC6 and the proteins made by these methods, antibodies against hAC6, vectors, probes and host cells (especially HEK-293) transformed by genes encoding polypeptides having hAC6 activity, along with a clarapeutic uses for these various reagents. hAC6 can be used as a tool to screen for agonists and antagonists that stimulate/inhibit hAC6. Such compounds have therapeutic utility in treating diseases caused by abberrant activity of this enzyme, in treating diseases caused by aberrant activity of this enzyme, while the compounds have their peuting or and diseases whose symptoms can be ameliorated by stimulating or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    204

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                   A canine heart cDNA library was constructed in lambda gtl0 and was screened with a 970 bp Aatl-Hincil fragment from type I adenylyl cyclase CDNA probe (encodes the first cytoplasmic domain of adenylyl cyclase, which has significant homology to other previously known types of adenylyl cyclase). One positive clone, of 5.4 kb was obtd. Positive colonies were subcloned into puclB and further subcloned on a sequenced bidirectionally. The 5.4 kb clone was used to rescreen the library and on averlapping clone contg. the 5' end of the gene was isolated. Together the two clones cover the complete canine cardiac adenylyl cyclase gene. The gene is suspected of being involved in the regulation of cardiac function and it is thought that decreased activity of adenylyl cyclase in the heart may be a major factor in the development of heart failure. Thus the adenylyl cyclase gene is useful to screen cpds. which stimulate the activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    131 ATGTCGTGGTTTAGTGGCCTCCTGGTCCCCAAAGTGGATGAACGGAAGACAGCCTGGGGT 190

```
A recombination and party cyclass is described with wild type enzyme is much easier compared with wild type enzyme sond the enzyme is more stable than the wild type enzyme which allows easier screening of compounds that stimulate and inhibit Adenylyl cyclase activity. The recombinant adenylyl cyclase activity. The recombinant adenylyl cyclase comprises a chimera of adenylyl cyclase (1 and C_2 domains linked covalently. The domains may be linked by a linker peptide. The recombinant adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase activity. Inhibitors of the enzyme are useful for treating cholera, pituitary tumors, heart failure, ischemia, endocrine disorders and cell necrosis. Stimulators of adenylyl cyclase activity provides and stimulators of adenylyl cyclase activity provides and cyclase activity inhibitors of the enzyme are useful for cyclase are useful for treating pseudohypoparathyroidism and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel soluble mammalian polypeptide composition comprising adenylyl cyclase activity for screening stimulators and inhibitors of adenylyl cyclase, is activated by Gsalpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GluargasnGlyGlnLysArgSerArgargArgGlyThrArgAlaGlyGlyBheCysThr 40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199120 to AB199112, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB19913 and AB199914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
